

ENVIRONMENTAL POLICY

Sunzen Corporation Sdn Bhd, a subsidiary of Sunzen Biotech Berhad, specializes in manufacturing animal health supplements with a commitment to excellence, adhering to strict quality standards and ethical principles. Our product range includes additives, disinfectants, and vaccines for livestock and small companion animals. With a focus on environmental stewardship, we prioritize safe waste management at our manufacturing plant. Recognizing our environmental responsibility, we've established an Environmental Policy with top management and workers' collaboration. This policy guides us in integrating environmental considerations into all operations, aiming to minimize our ecological footprint and enhance sustainability through innovation. At Sunzen Corporation Sdn Bhd, we are committed to:

1. Implementing practices that promote self-regulation and minimize waste generation throughout our manufacturing processes.
2. Complying with all relevant environmental regulations and standards, while actively promoting adherence to the 3R (Reduce, Reuse, Recycle) concepts and striving to exceed legal requirements wherever possible.
3. Continuously assessing and mitigating the environmental impacts of our activities, products, and services, with a focus on waste minimization and resource conservation.
4. Encouraging the responsible use of natural resources and the adoption of eco-friendly technologies throughout our operations.
5. Providing ongoing training and education to our employees to foster environmental awareness and empower them to contribute to our sustainability objectives, emphasizing the importance of waste reduction and resource efficiency.
6. Engaging with stakeholders, including suppliers and customers, to promote environmentally responsible practices across our supply chain and product lifecycle, with a particular emphasis on encouraging the adoption of eco-friendly technologies and practices.
7. Regularly reviewing and improving our Environmental Policy to reflect evolving environmental priorities and best practices, with a focus on enhancing waste minimization efforts and the responsible use of natural resources.
8. Providing transparency and accountability through regular reporting on our environmental performance, including progress towards waste reduction targets, energy efficiency improvements, and other key metrics.
9. Conducting regular inspection and assessments to evaluate the effectiveness of our environmental management systems and identify opportunities for improvement.
